INTRODUCTION

This volume is the 7th index to the Philippine Journal of Science and covers materials found in Volumes 105 to 109 (1976-1980), a five-year compilation. The journal is published quarterly (in March, June, September and December) or four issues in each volume or year. However in our effort to up-date the publication some issues have appeared as combined editions of two numbers and published bi-annually (January to June and July to December).

Listed in this volume are the table of contents of each number, an authors' index, and a subject index.

Volume numbers are printed in boldface, page numbers are printed in arabic numerals, and different volumes in one subject are separated by semicolon.
